

# Microvac series oil sealed rotary piston pumps

In today's globally competitive environment, the need for manufacturing and process equipment delivers maximum performance and reliability is greater than ever. Whether you operate at low pressure, handle large gas loads, or simply need increased capacity for your existing system, Edwards can help meet your pumping requirements.

## Rugged, reliable operation

Every design consideration, feature and detail is thoroughly engineered to maximize uptime and extend operating life. Below are just a few features that testify to the integrity of these rugged multistage vacuum pumps.

- Efficient, time proven design to deliver ease of maintenance
- Robust cast and ductile iron construction
- Hardened replaceable shaft sleeve enhances wear resistance
- Application specific seals maximize resistance to heat and corrosion while providing protection from gas stream oil contamination
- Standard, totally enclosed fan-cooled motor on direct drive units provide an economic alternate to belt drive units

## Solutions to fit your needs

Our total vacuum capabilities include a full line of pumping systems from 150 to 7880 ft<sup>3</sup>min<sup>-1</sup> capacities. Choose from microvac rotary piston pump (H or J series), 1700 series high capacity packages, and 1800 series mechanical booster packages, or a custom designed package to meet all your pumping needs.

## H & J series overview

The J series microvac rotary piston pump sets the standard for performance and reliability as the industry's most efficient, space-saving design. The microvac rotary piston pump has been improved, upgraded, and fine-tuned to deliver even better dependability and productivity combined with minimal maintenance and process downtime.

An integral oil distribution system eliminates external piping and delivers leak-free operation in a more stylized design for the J series. A larger oil sight glass and paddle wheel design flow indicator provides easier viewing of the oil system function. A stiffer motor mounting platform cuts flexibility to minimize motor belt wear. A stylized oil reservoir cover and side cover O-rings improve sealing to eliminate oil leakage. An integral gas ballast valve built into the side cover allows quick adaptation to automatic gas ballast.

Most importantly, these improvements don't increase the industry leading space saving footprint. Inlet, outlet and mounting dimensions are exactly the same as the H series microvac rotary piston pump.

## Features & benefits

- Rugged reliable operation - robust cast and ductile iron construction
- Efficient design - provides maximum uptime with minimal moving parts and large clearance
- Low ultimate blank-off - pressures down to < 10<sup>-2</sup> Torr
- Quiet operation-new valve design virtually eliminates valve maintenance and noise
- Space saving design - saves up to 50% of valuable floor space
- Complete and self-contained - delivered and ready to install
- Automatic lubrication - system provides proper flow of oil to bearings and sealing surfaces, prevents back flow into system
- Controlled balancing - reduces vibration to a practical minimum
- Gas ballast- standard on all models
- Total capability - includes the manufacturing and service capabilities to keep your equipment in top operation - with a broad range of vacuum system accessories
- Oxygen service models available

## Applications

- Automotive
- Chemical processing
- General applications
- Heat treatment
- Leak detection
- Metallurgy
- PET processing
- Pharmaceuticals
- Transformer drying and cable fluid conditioning
- Vacuum coating
- Vacuum melting

By combining over a century of technical experience with a global sales and service network, Edwards adds value to your process. Our applications specialists can offer advice on a single pump or component through to a complete pumping system, custom tailored to your specifications. Applications suitable for the microvac rotary piston pump include:
